

Exporting a GIF in Photoshop

Follow the steps below to export your GIF. When exporting as a GIF try to keep your file size smaller than 5MB. Depends on where this is being displayed if you want a larger size.

How to Video - [How to export a GIF!](#)

- 1) Open the Mandala PSD that you have animated
- 2) Go up to **File** → **Export** → **Save for web (legacy)**
- 3) Now we need to reduce the size of the GIF. Try to get it under 5MB. Where it says **“Percentage”** change it from 100% to 50%. This should drastically reduce your file size. You could also reduce the colors in the artwork.

- 4) Once you have your settings that way you want, click **"Save"** and then name your file and select a location and then hit **"Save"** again.
- 5) Go find your GIF in its location and try to play it!
